

Supplementary File 9 Legend (Figure S5):

Codon-pair and amino acid pair symmetric uncertainty plots for each human reference gene. See the legend of Figure 3 for the definition of color keys for each information bar. Also shown are figures displaying the symmetric uncertainty for codon pairs and amino acid pairs across the gene sequence. It compares SU values derived from the original human reference alignment (black) with those from target taxonomy group-only (yellow) and non-target taxonomy group (green) subsets.

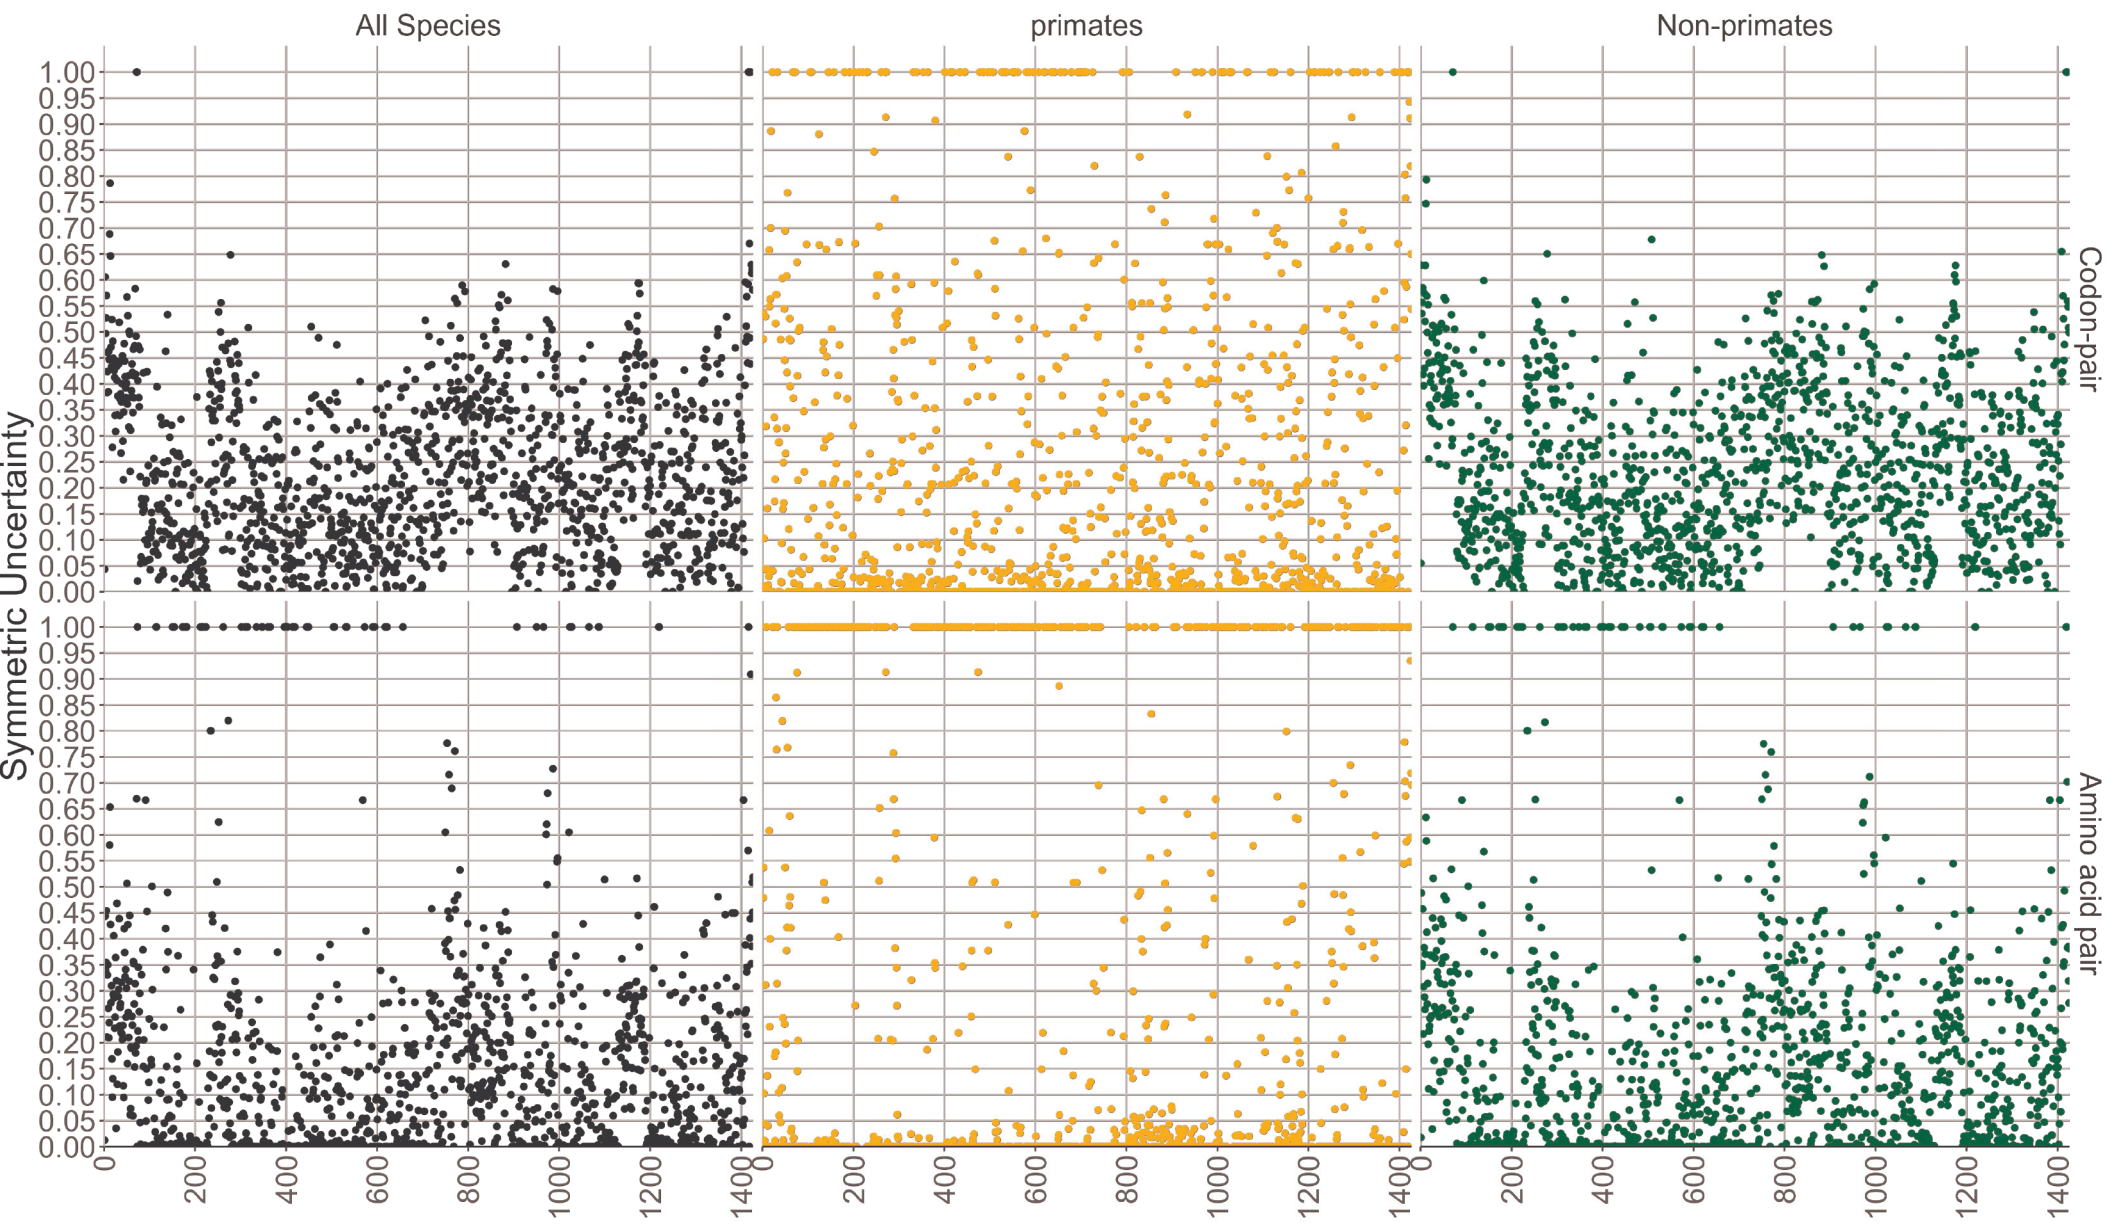

Symmetric uncertainty in ADAMTS13 - 23 artiodactyla sequences

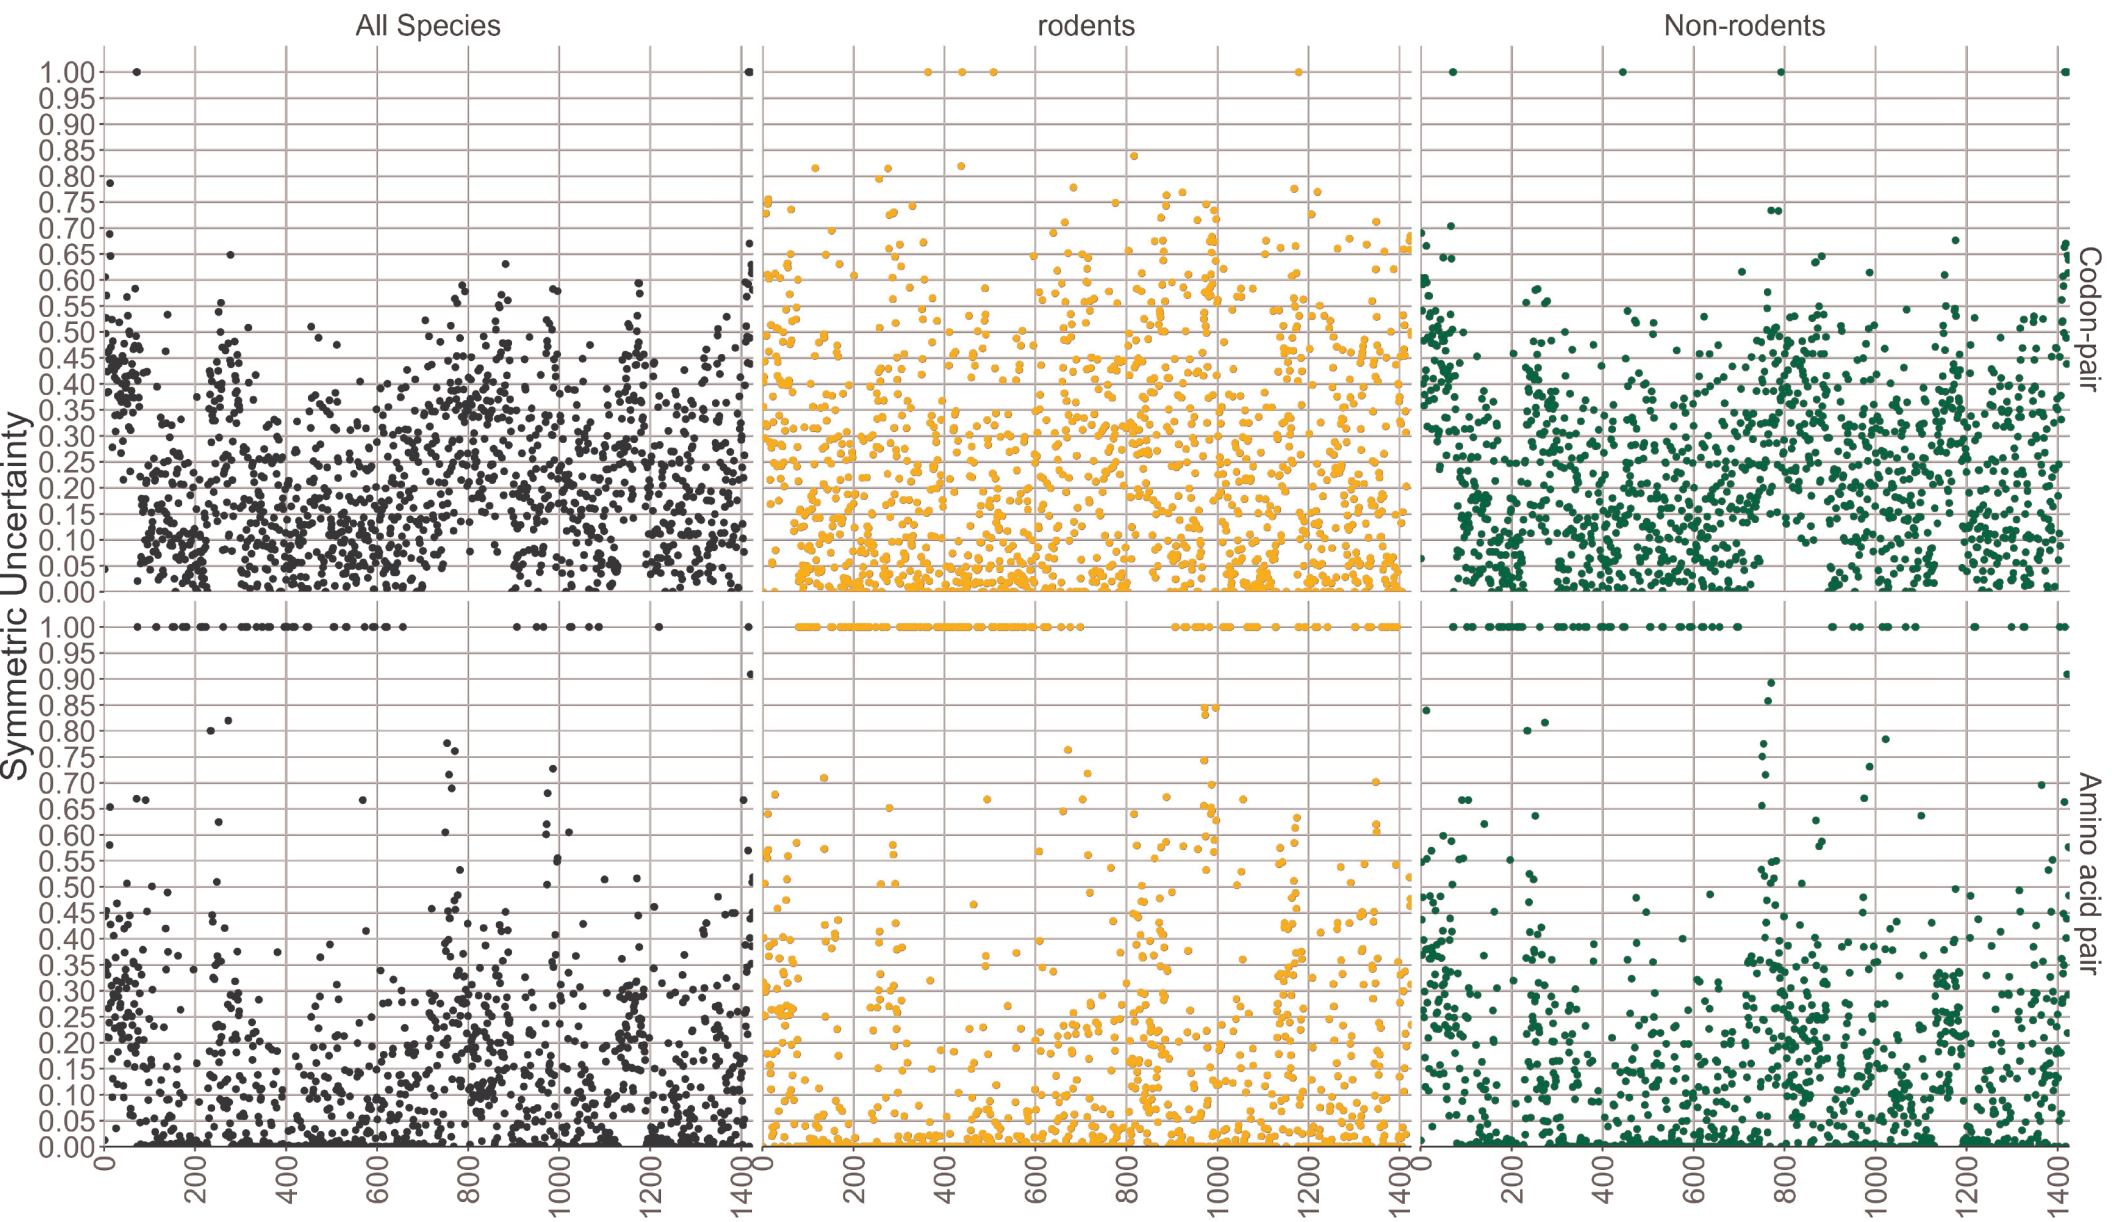

Symmetric uncertainty in ADAMTS13 - 32 carnivores sequences

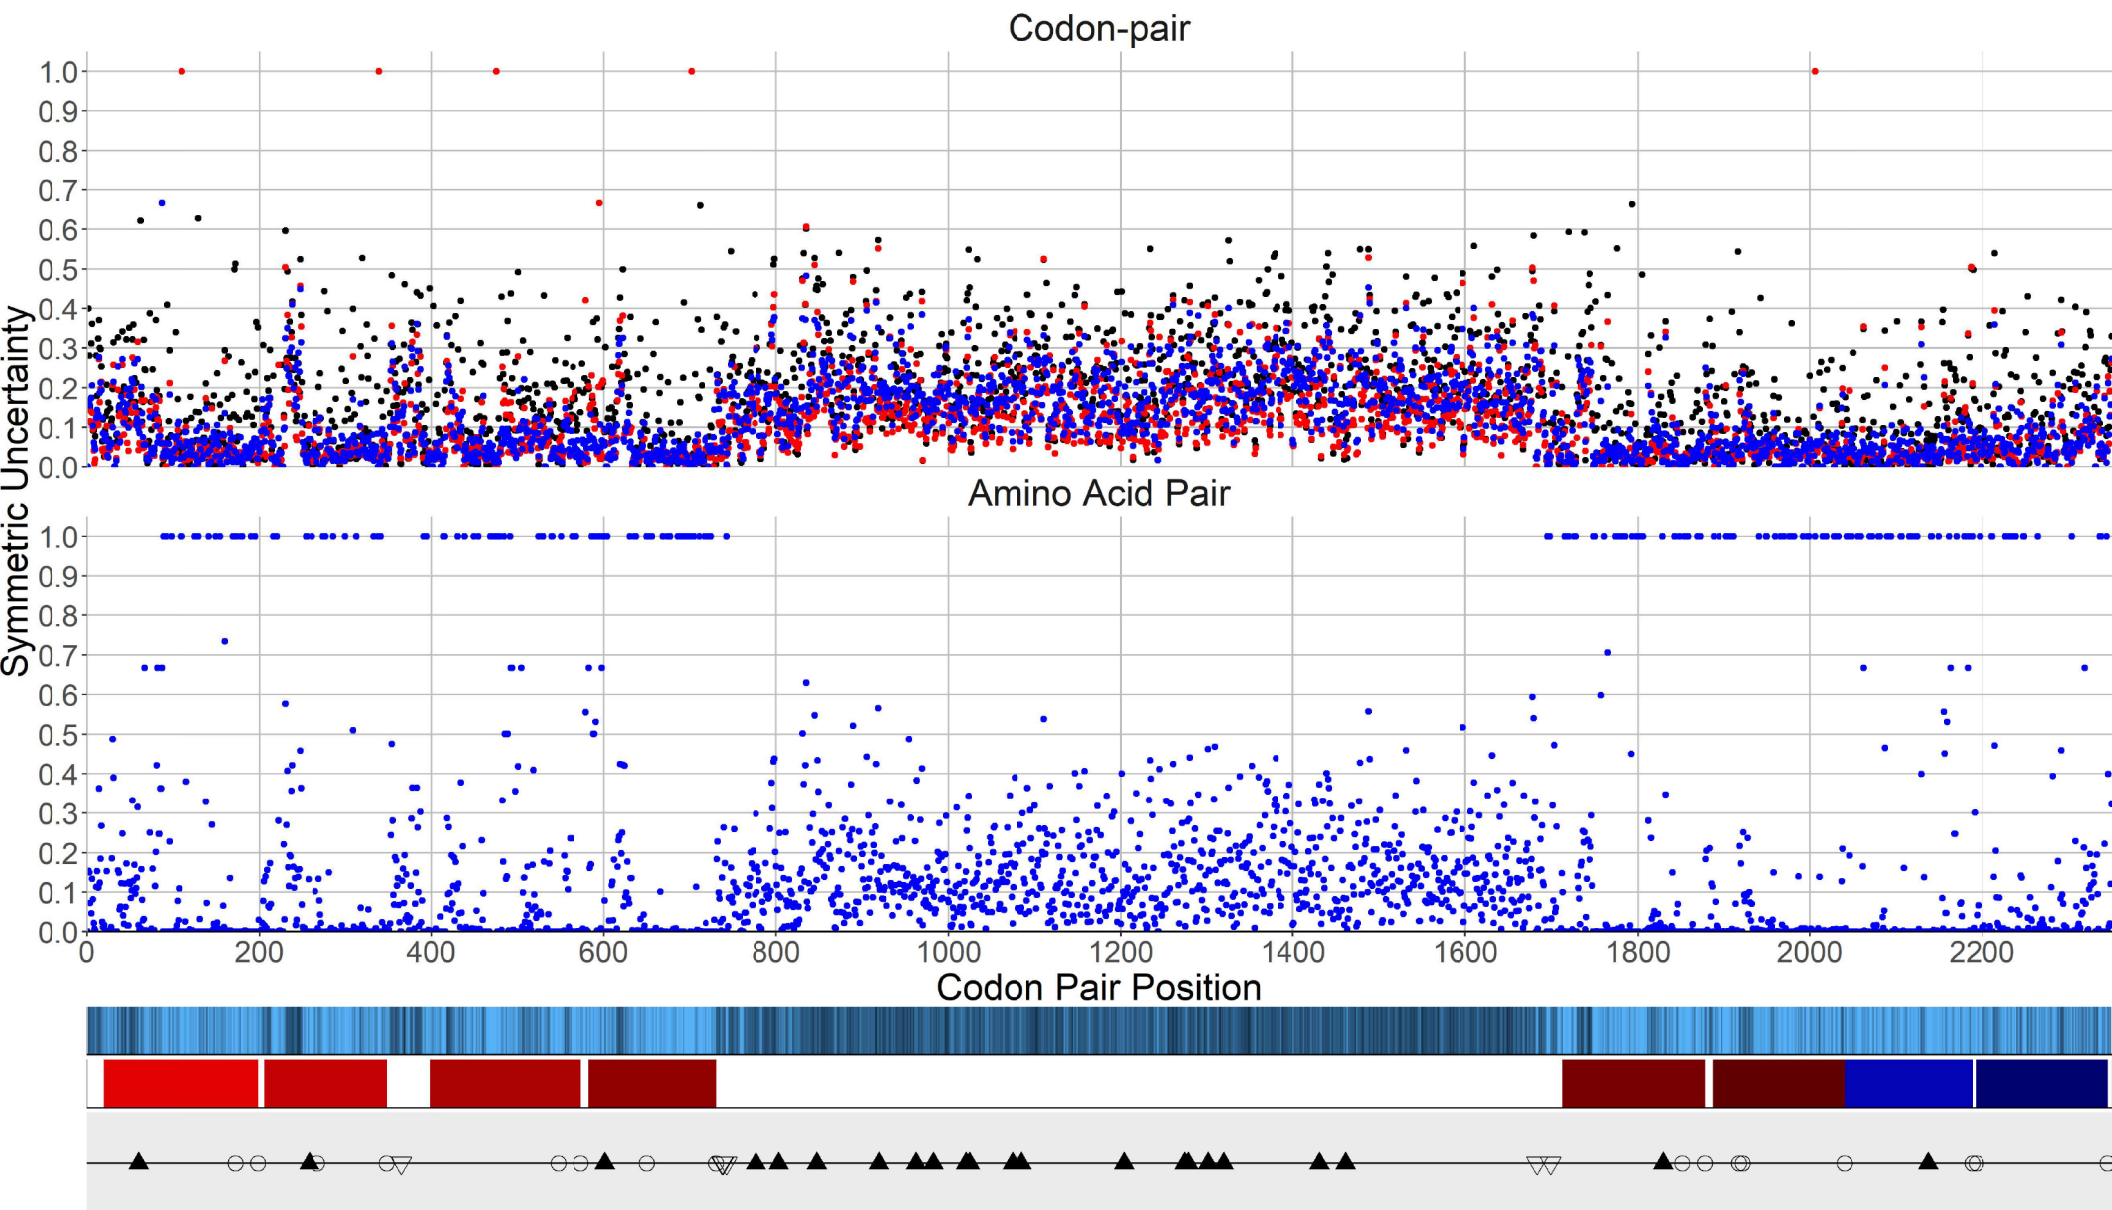

Symmetric uncertainty in ADAMTS13 - 28 primates sequences

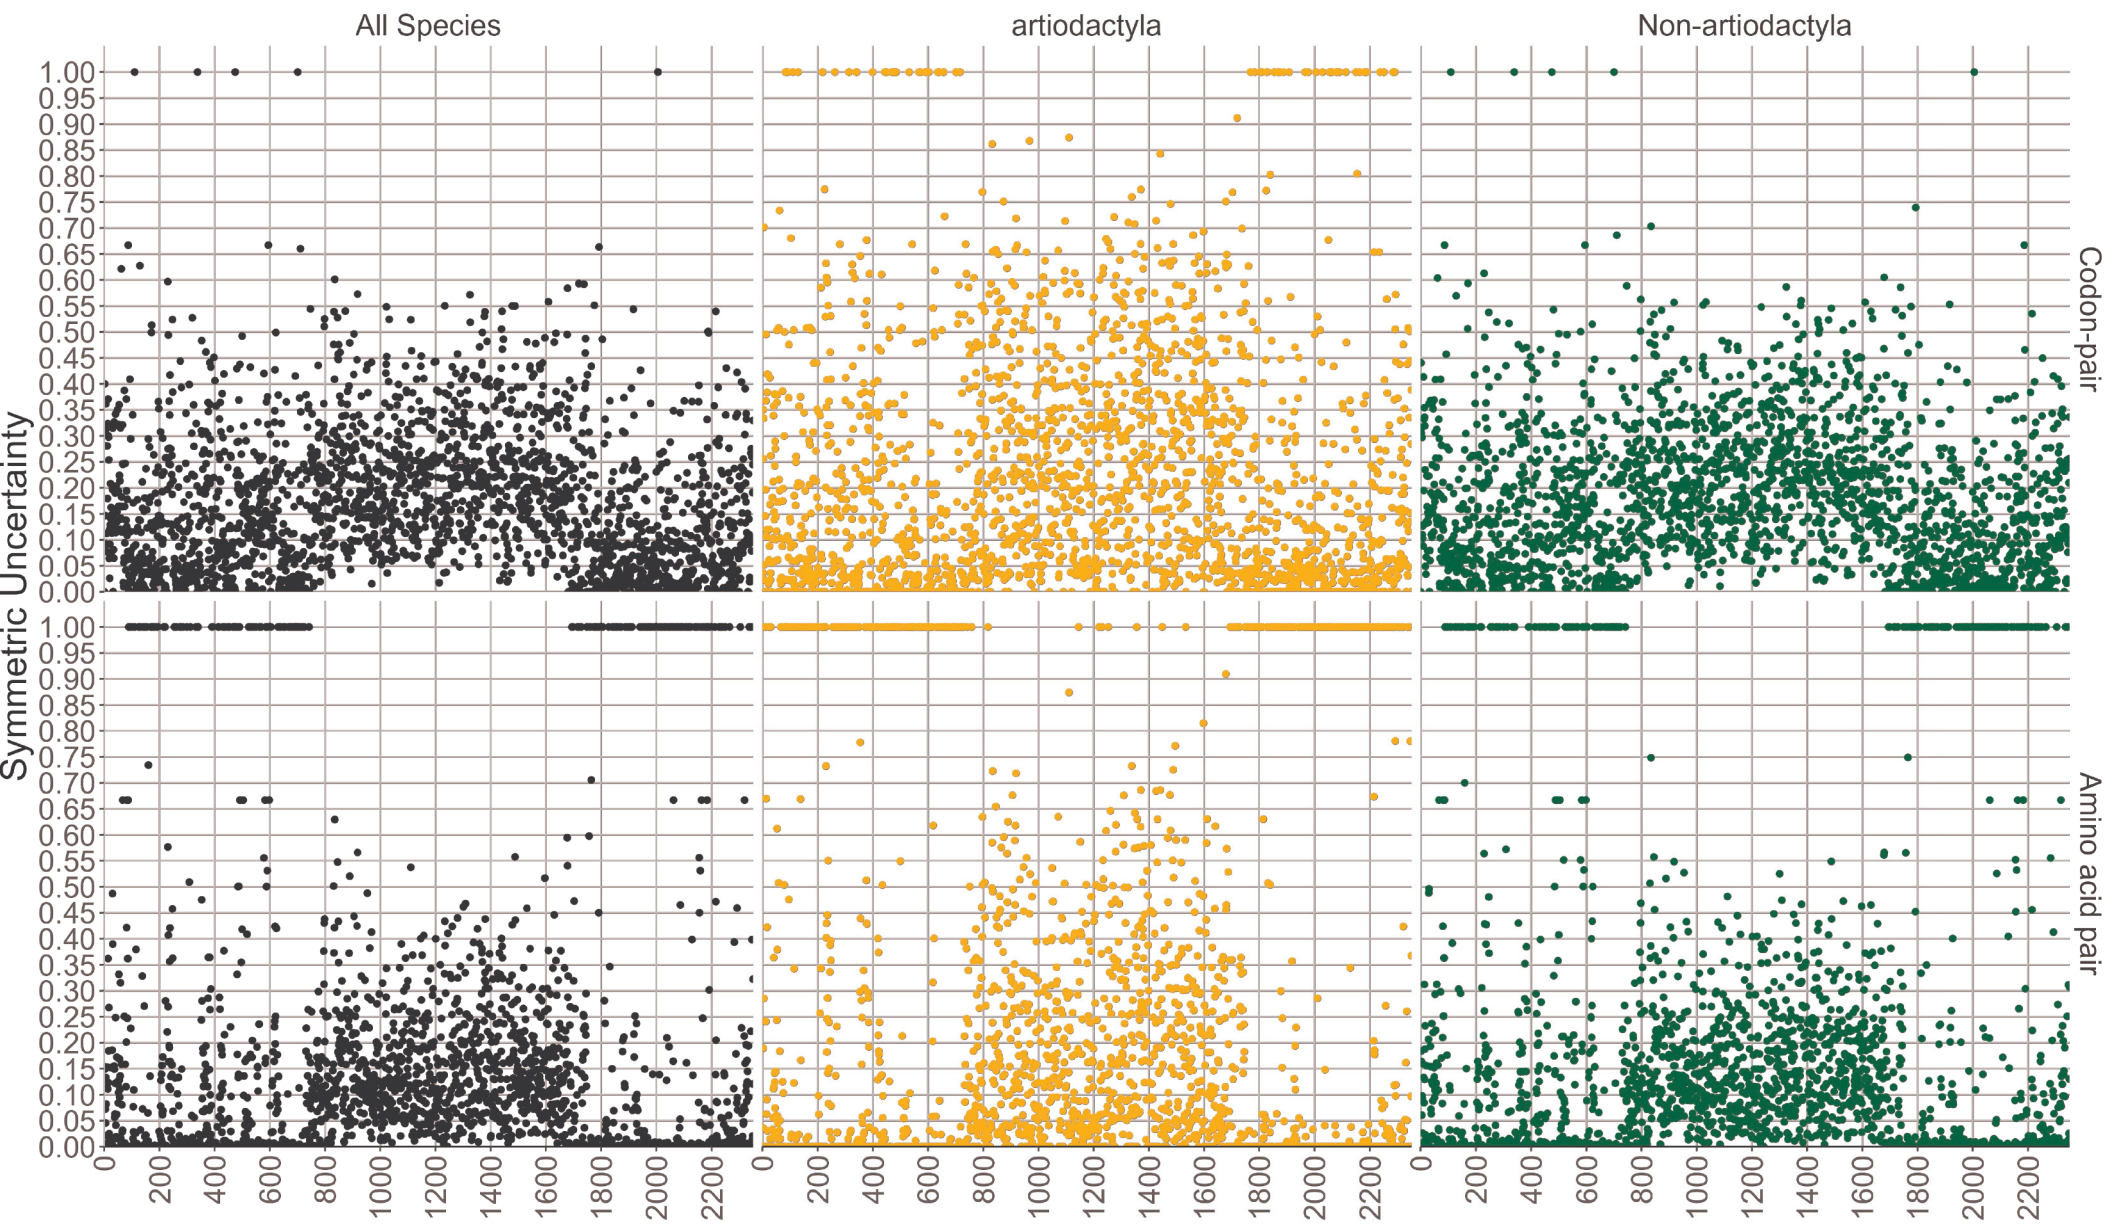

Symmetric uncertainty in ADAMTS13 - 33 rodents sequences

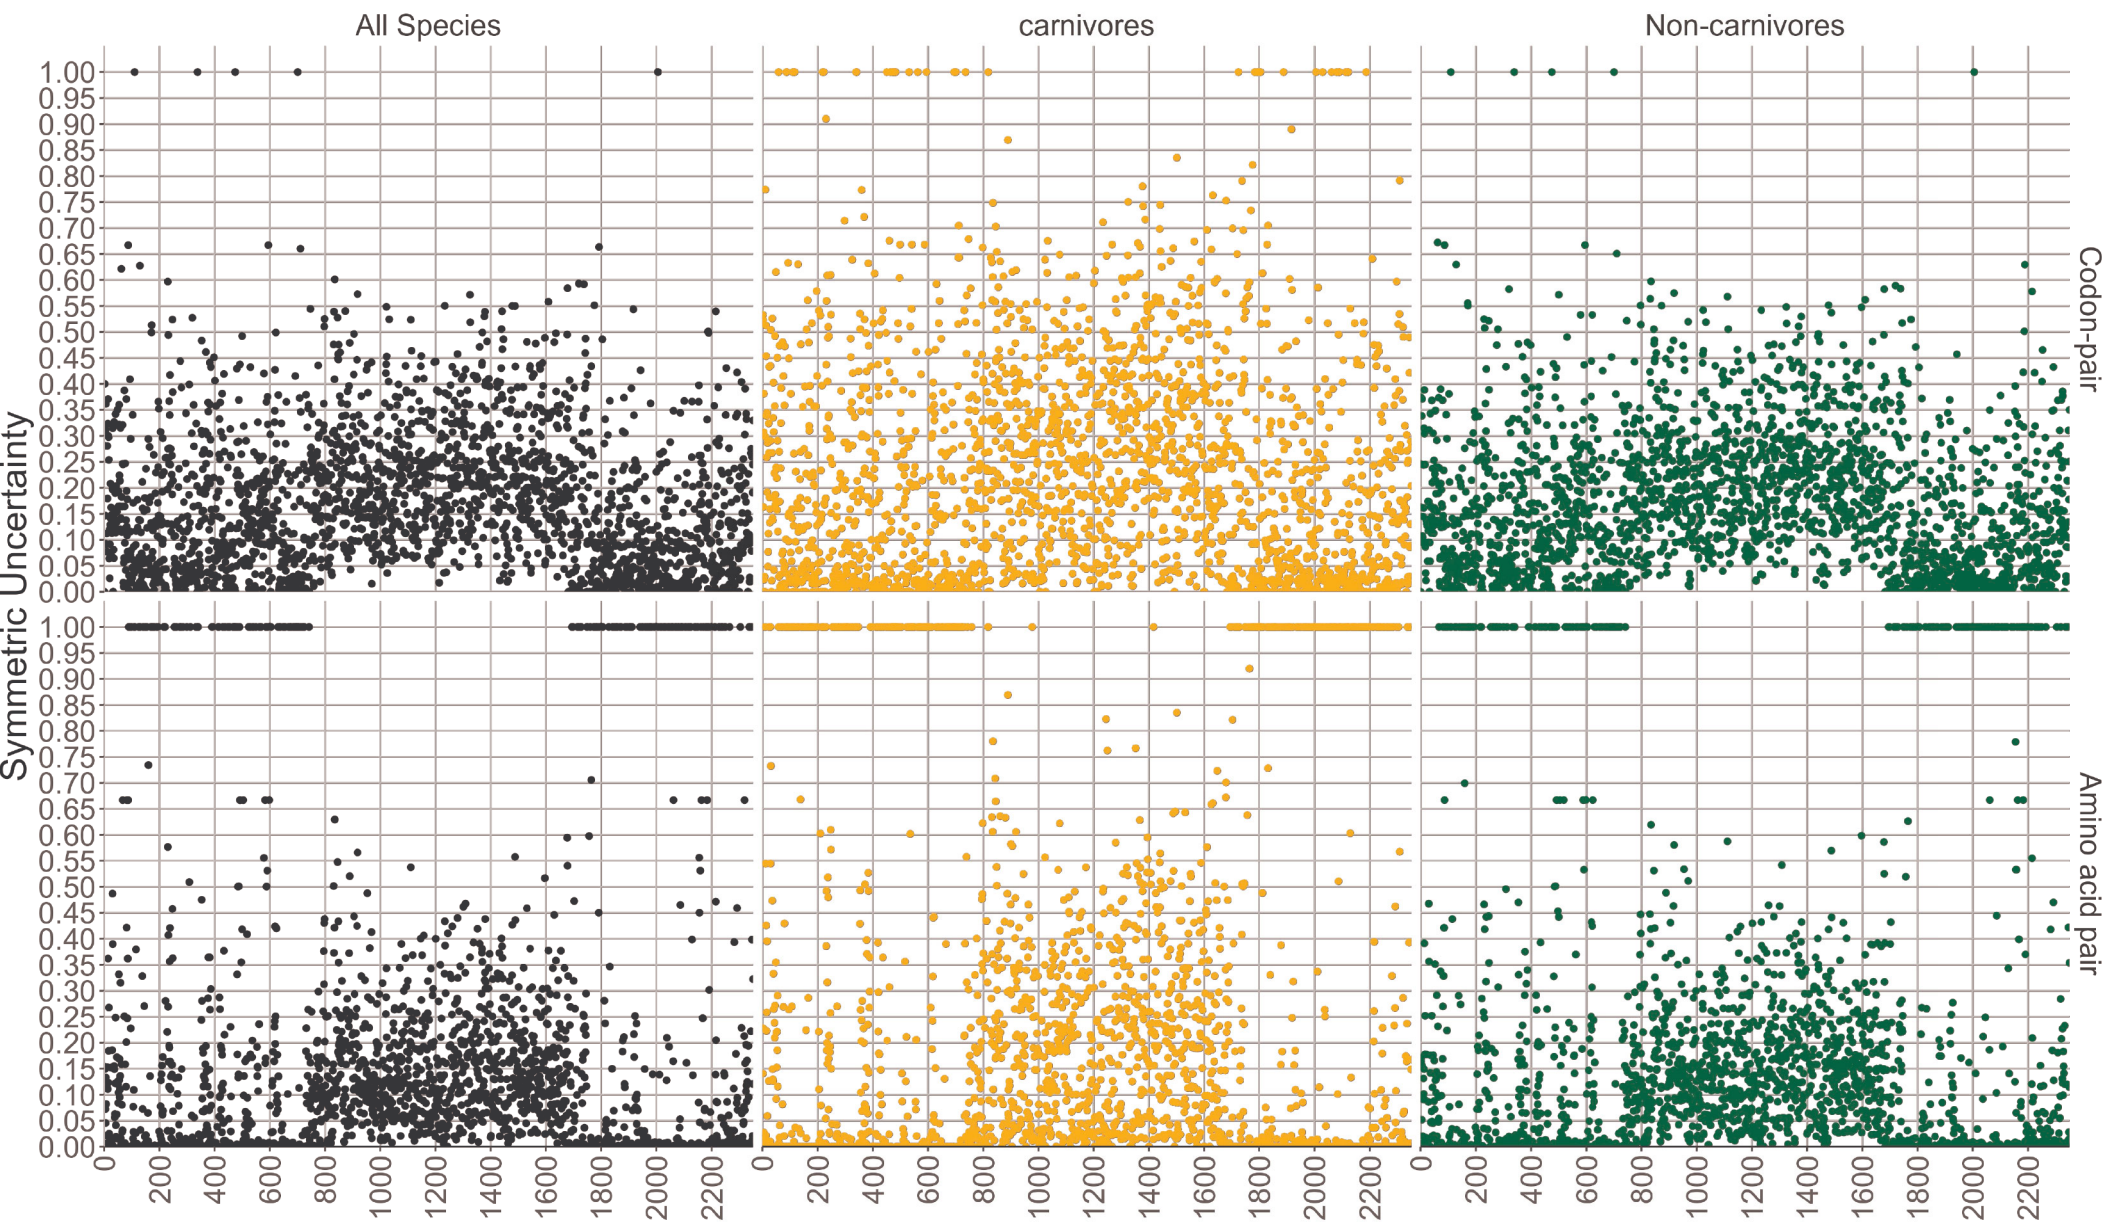

F8 Permutation Test Results

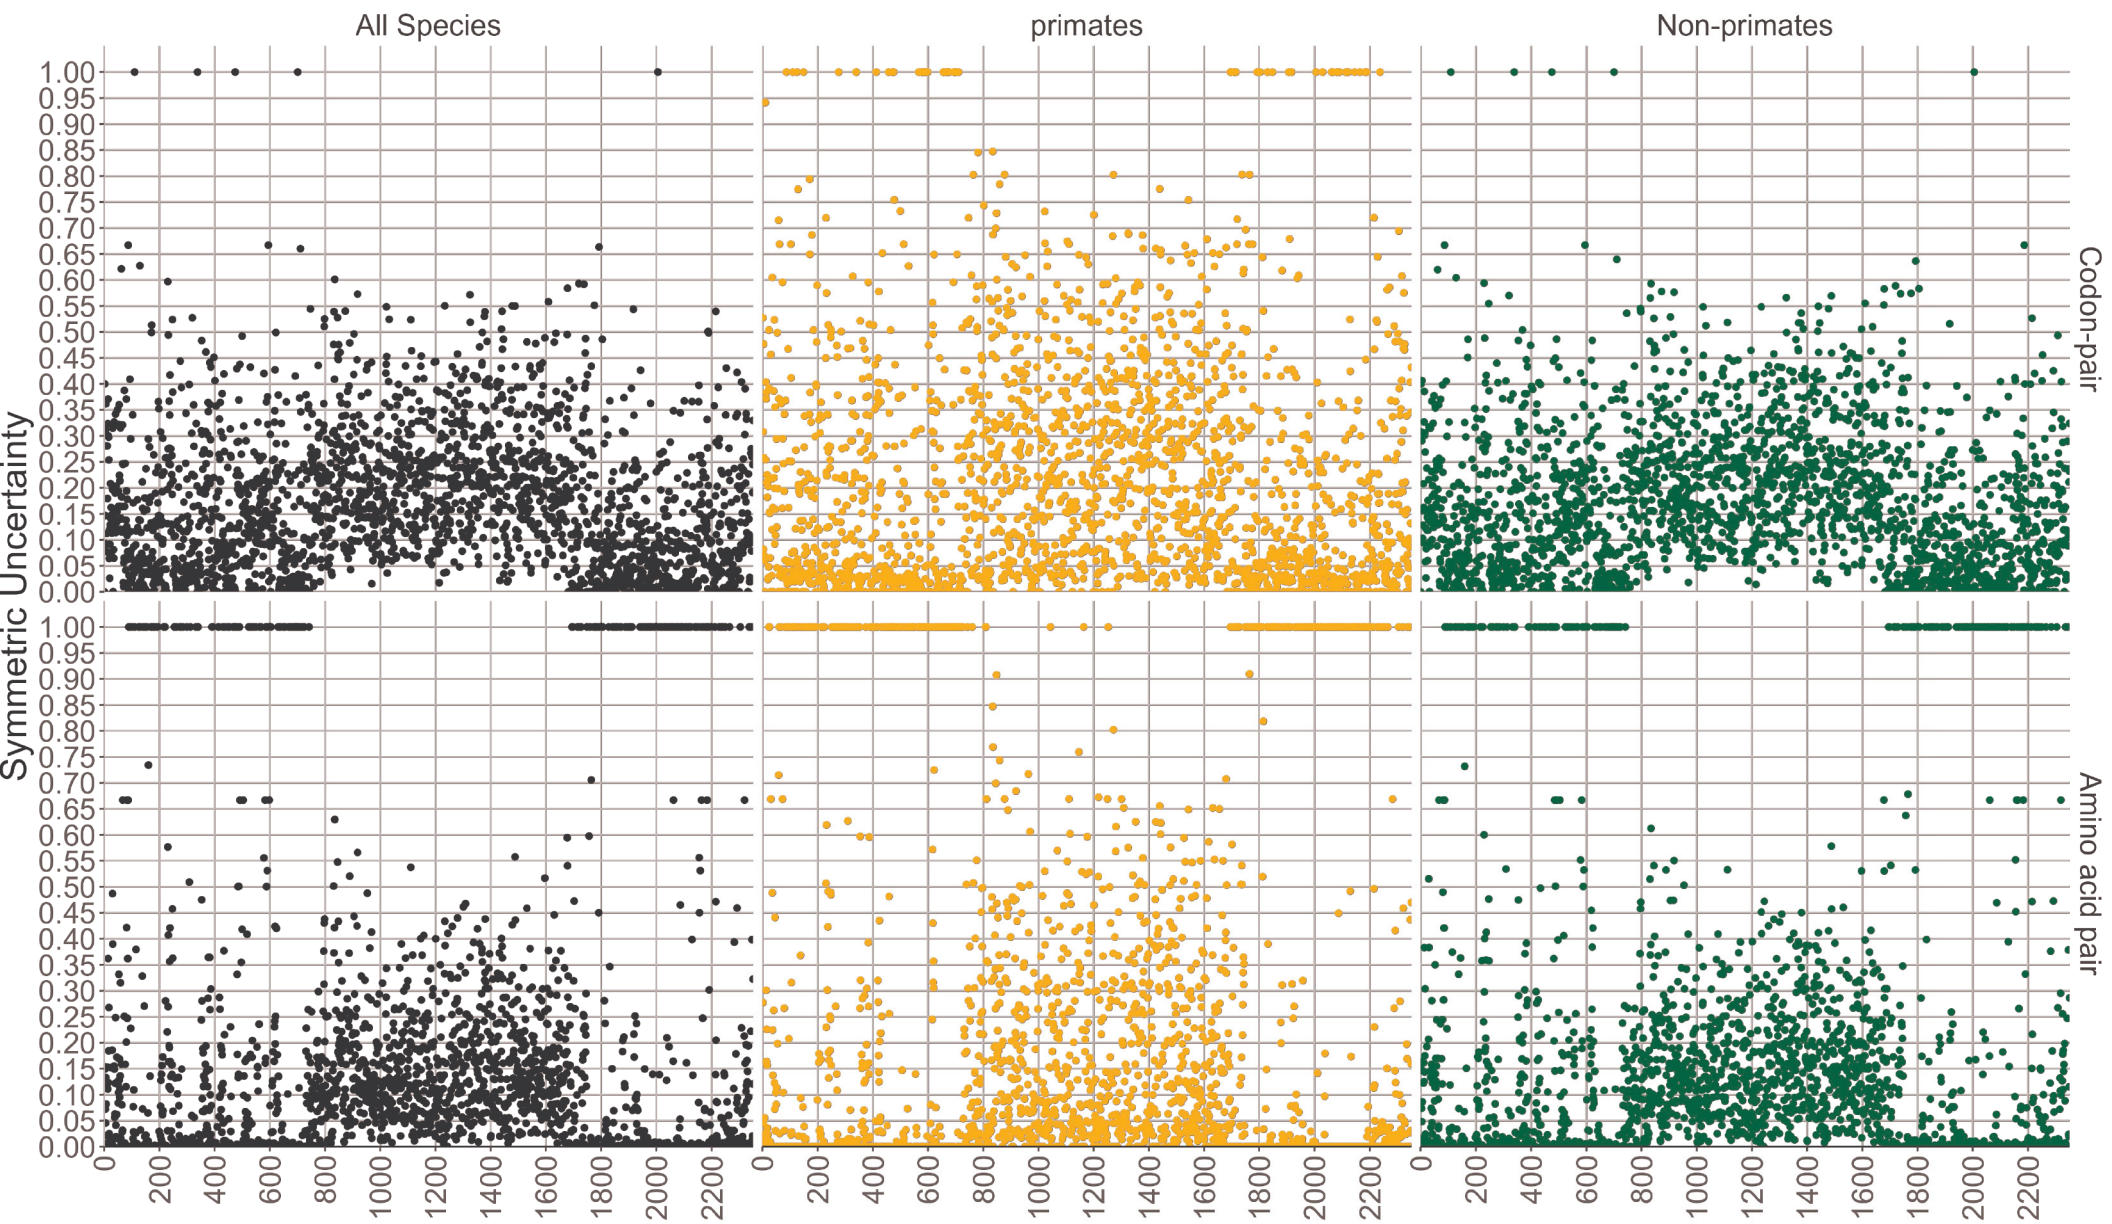

Symmetric uncertainty in F8 - 25 artiodactyla sequences

Symmetric uncertainty in F8 - 35 carnivores sequences

Symmetric uncertainty in F8 - 25 primates sequences

Symmetric uncertainty in F8 - 29 rodents sequences
